

LinTronic

TT455-RT-238 Configuration on a MAC

Hi,

I just want to let you know that I programmed the 238 with an I Mac. You don't need to buy extra software. Just download virtualbox (free of charge). This tool makes it possible to install every operating system you want on the I Mac. Next I installed Windows XP and the Lintronic software. The USB-DB9 connector was recognized by the software and I could program the 238 without problem.

Regards,

Paul
