TT455-RT-238 Triggers and Actions

Updated: 210102

TT455-RT-238 is designed to be activated by Triggers (incoming signal) which generates Actions (outgoing signals).

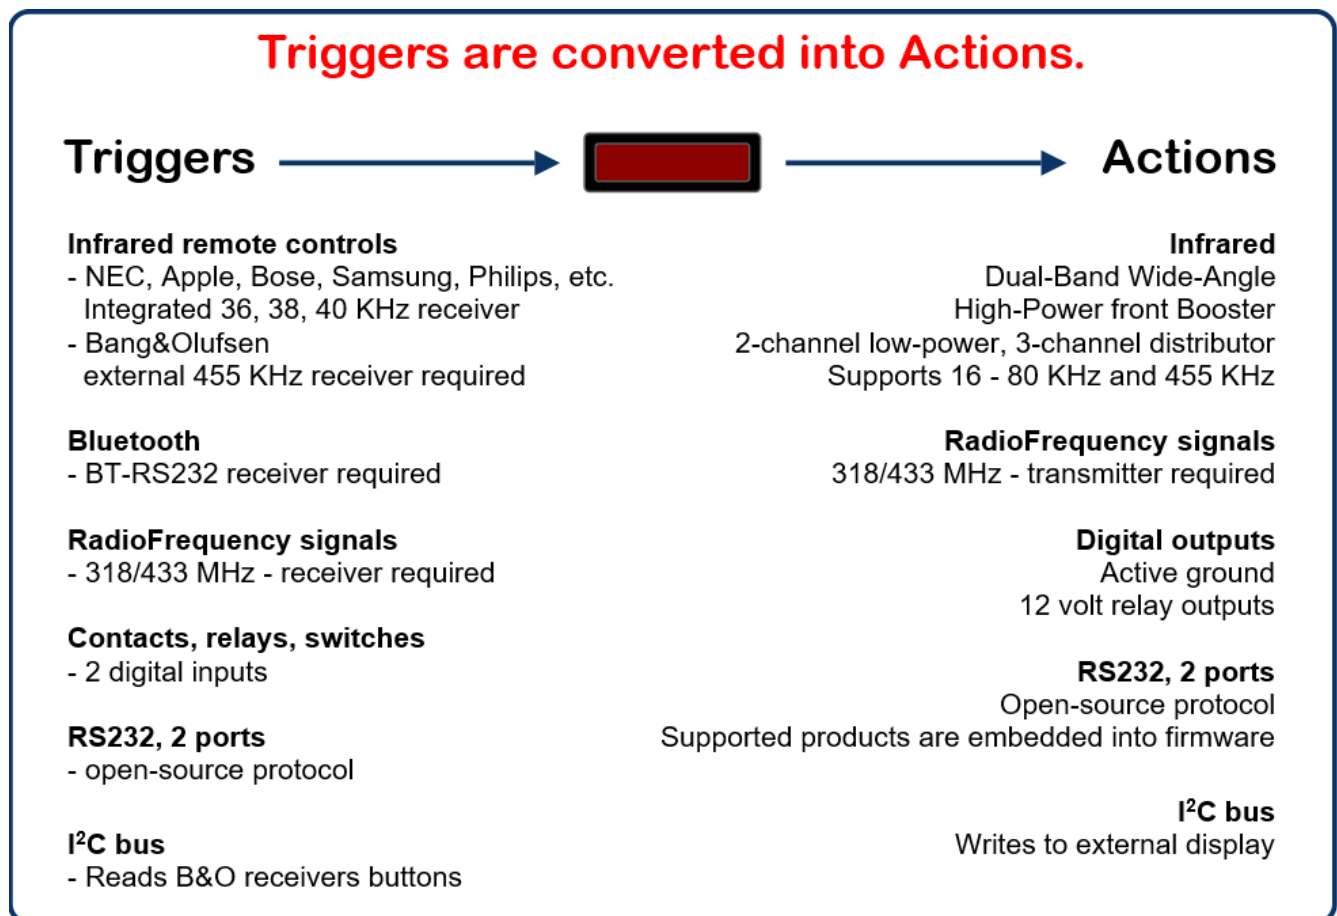

One Trigger can start many Actions (macro).

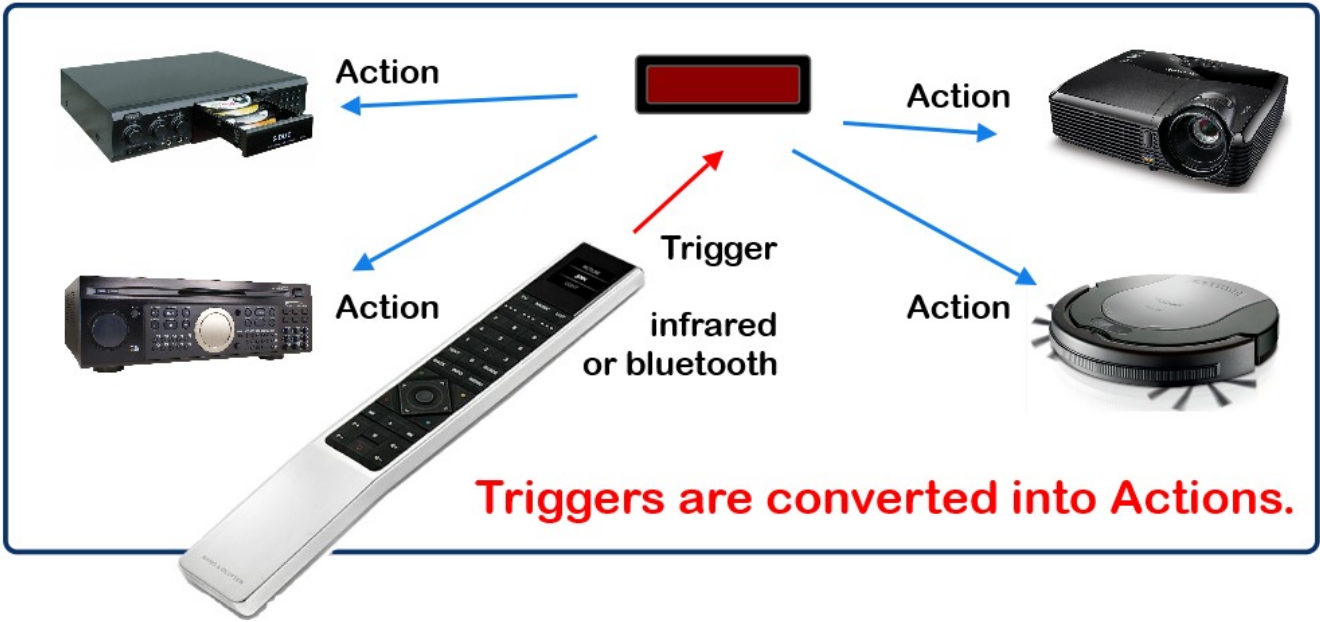

EXAMPLE

You send for example the PLAY command from an infrared remote control, and instruct the TT455-RT-238 to send out commands to start your DVD player, dim/set the light level and lower the curtains.

The TT455-RT-238 can read the buttons of the B&O IR receiver. This can be very handy if the remote is momentary misplaced and cannot be found.

Our product are 100% configurable - you specify what you want to control - and how.

Actions can control for example:

CD/DVD/BlueRay players

Amplifiers, SoundProcessors

and much more

Computer

Curtains Blinds

Tvs Screens

Projectors

Lights

AirCon, Fans, Ventilation

Vacuum cleaners

A few of the supported brands:

PHILIPS

Panasonic

Pioneer

IMERGE

SAMSUNG

LUTRON

HITACHI

LG

Bang&Olufsen

TOSHIBA

CLIPSAL

iLIGHT

LUXOM

intellibus

Helvar

DALI

Niko

SONY

kaleidescape

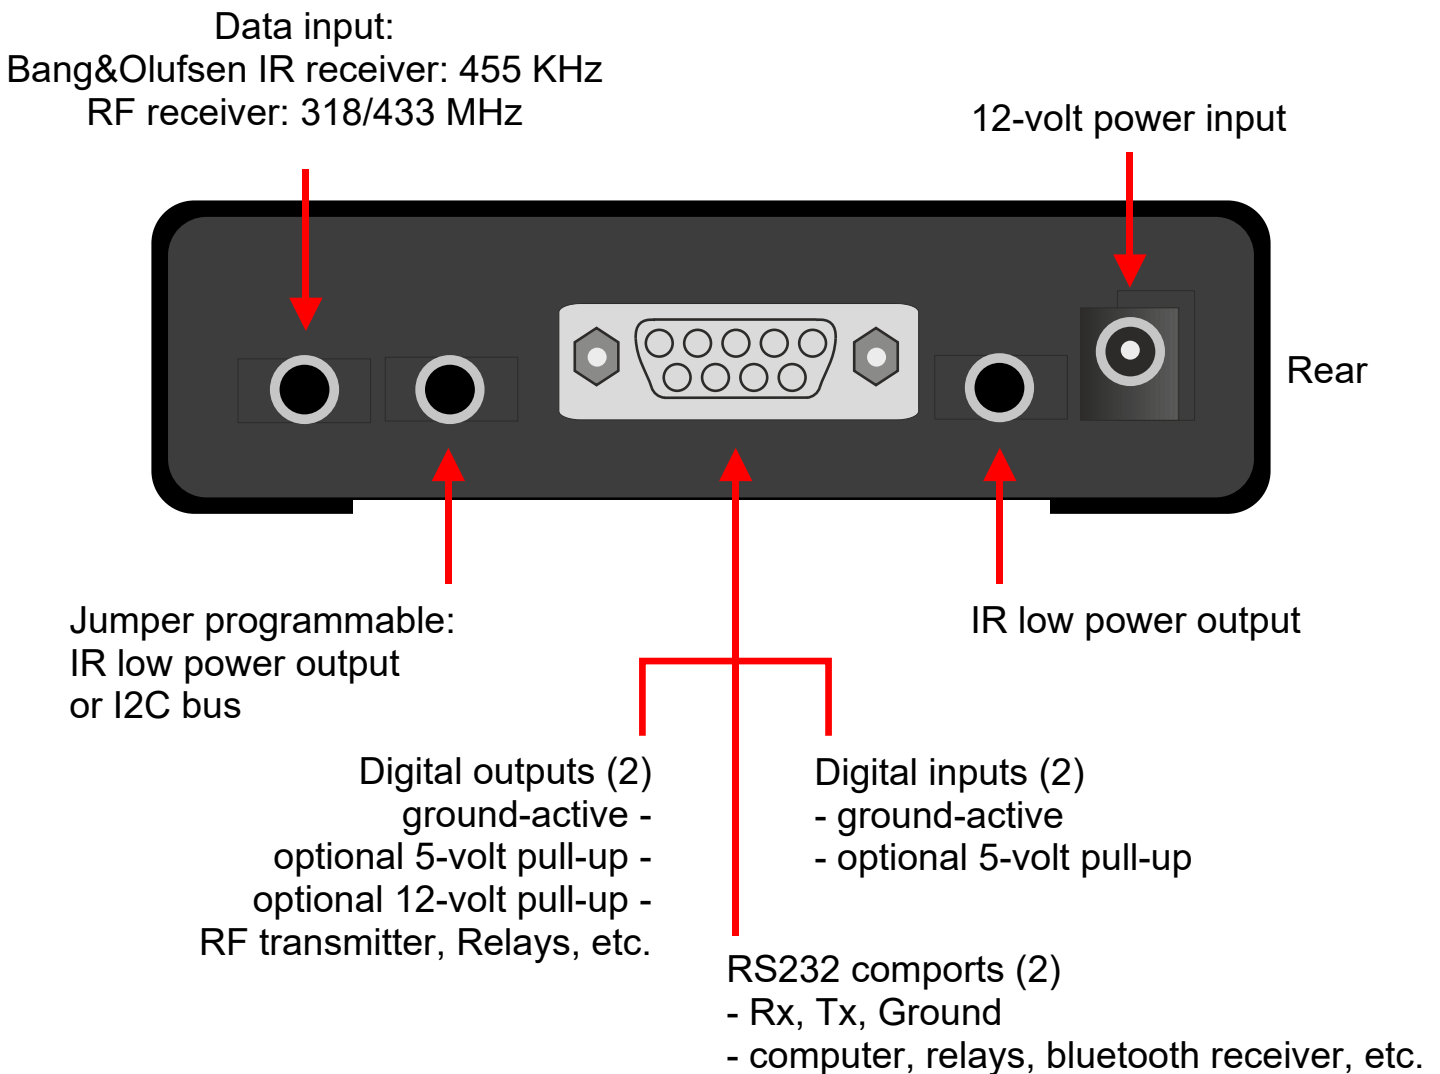

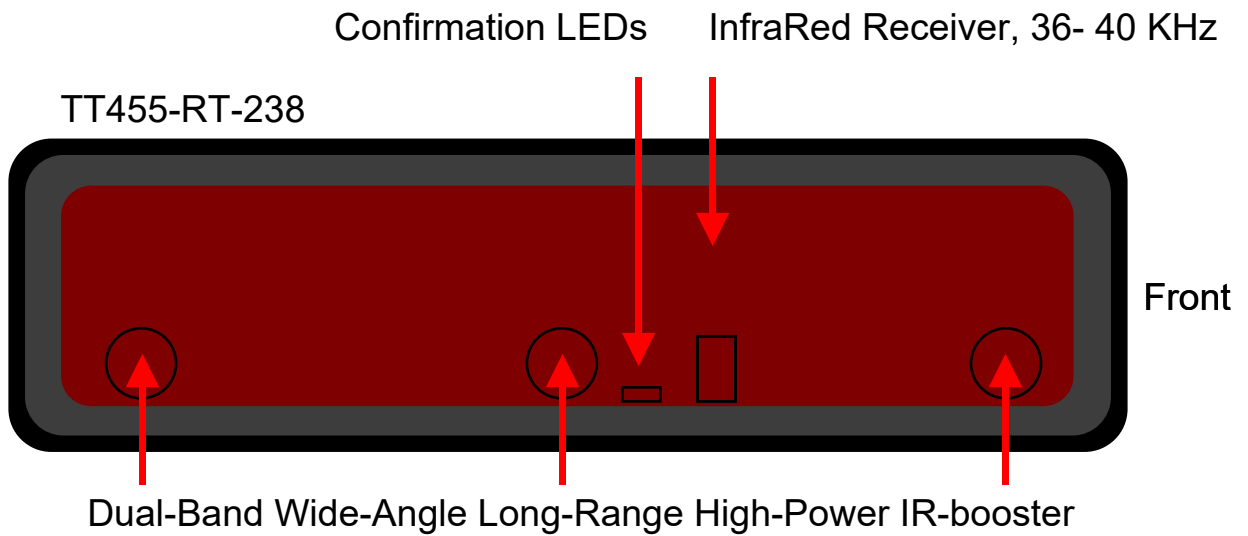

Gefen

VELBUS

CRESTRON

AMX

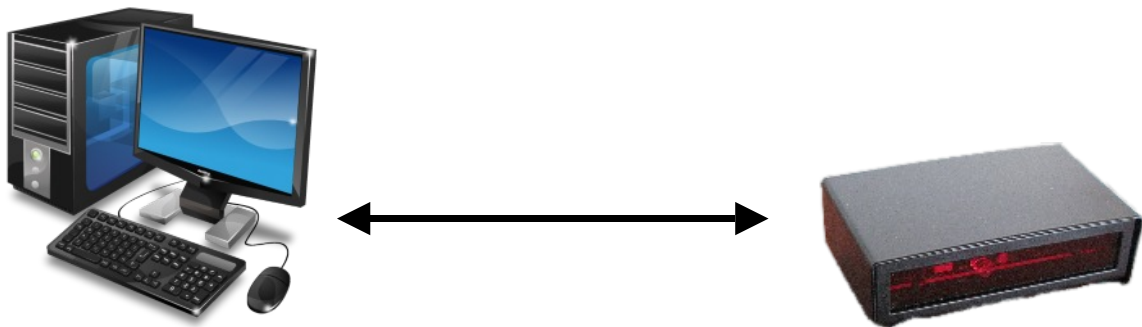

Microsoft

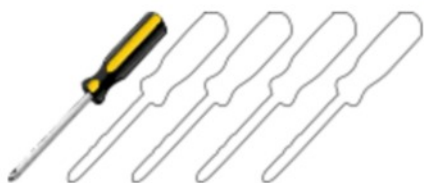

**No programming !
No scripting !
No coding !**

**TT455-RT-238 is easily configured
by our PC software
using mouse-clicks only.**

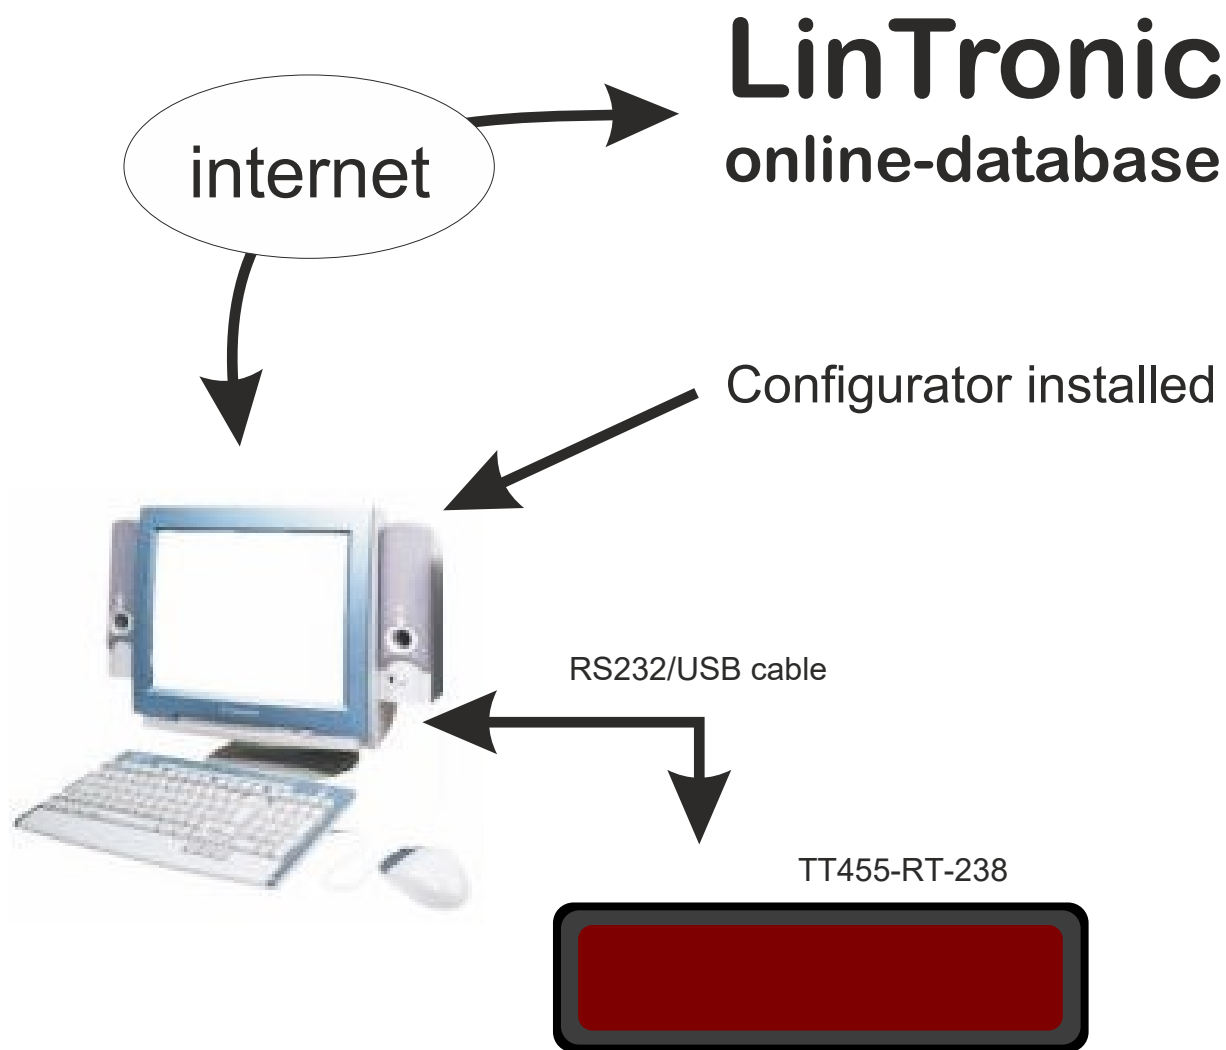

**When configured to work as you want
the TT455-RT-238 can be used
as a stand-alone controller
(no computer needed)**

Very easy installation - screwdriver level.

Difficulty level:
1 out of 5

During the configuration, you can freely download codes (Actions) from our database. You can test right away whether the downloaded codes work with your product.

Or you can read in the codes from your remote control - and upload them to our database later - to help others and yourself.

Triggers

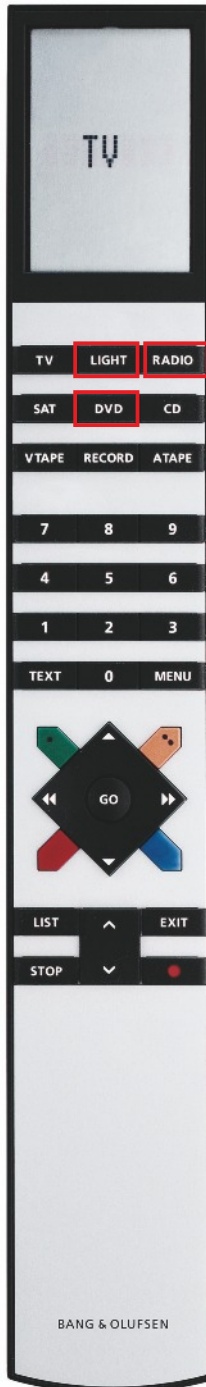

Actions

MEMORY MAP

The Configurator allows you to specify which Triggers should activate which Actions.

In order to keep the operation simple and make the best of the memory capacity, it is recommended that you only match the Actions you need.

This example to the right, will allow you to keep the original operation of your B&O TV, use the DVD commands to control your Pioneer DVD and use the LIGHT commands to control for example your Lutron light system.

RADIO could translate to your amplifier (or any other product as you want)

LIGHT could translate to your light system (or any other product as you want)

DVD could translate to your DVD (or any other product as you want)

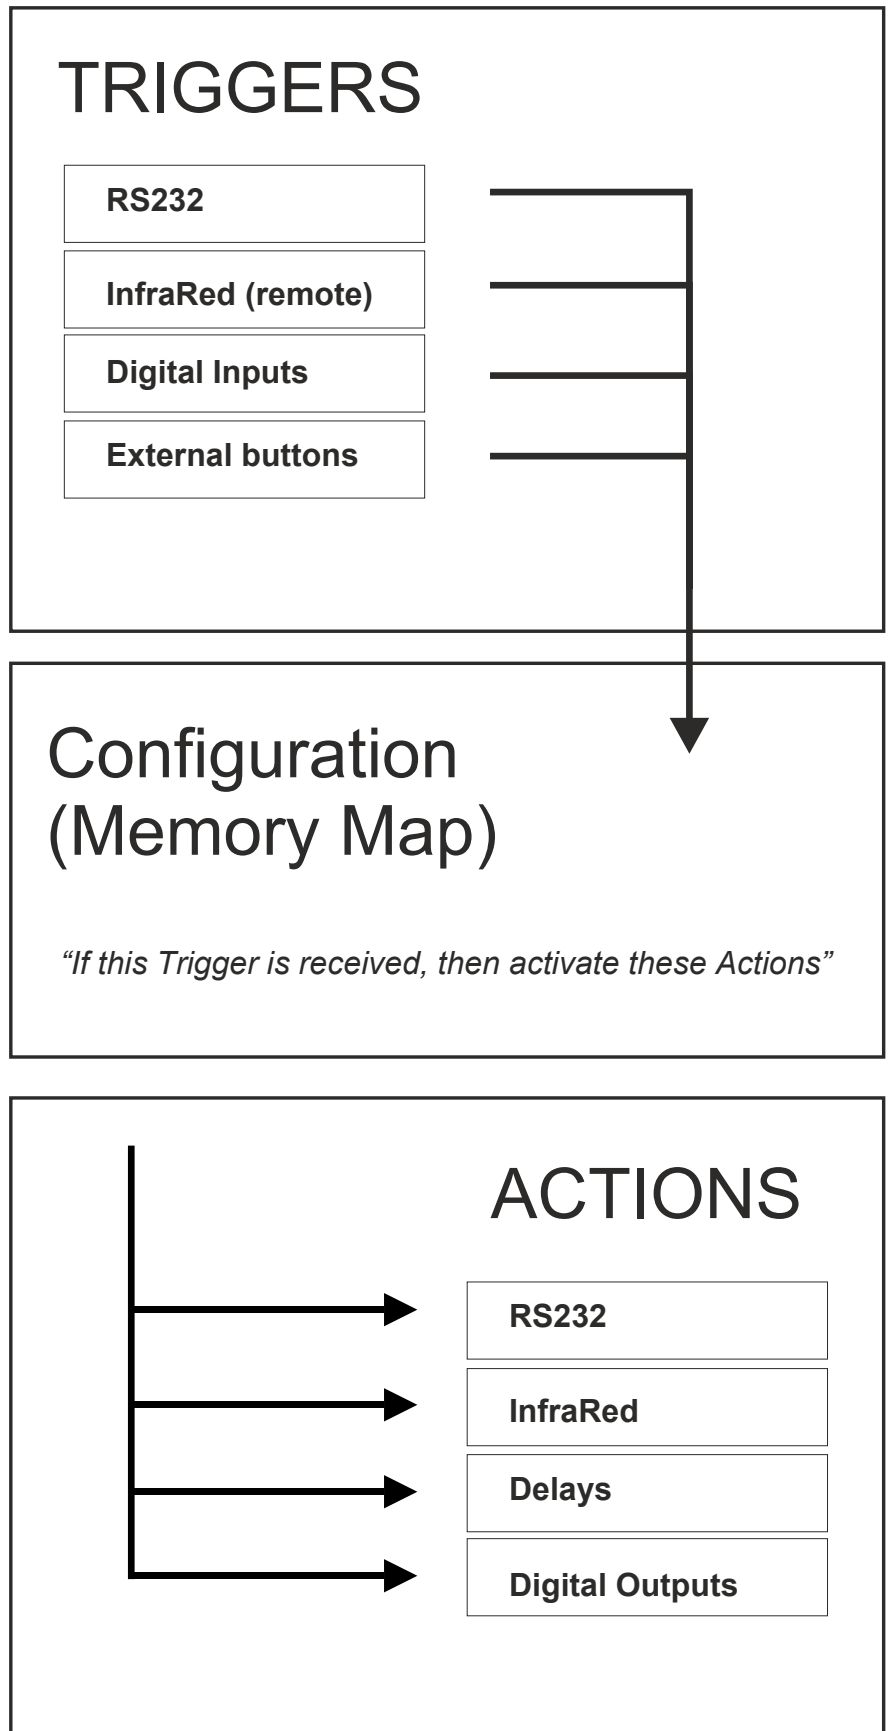

How it works

When a Trigger is detected, the Trigger is send to the Configuration (Memory Map).

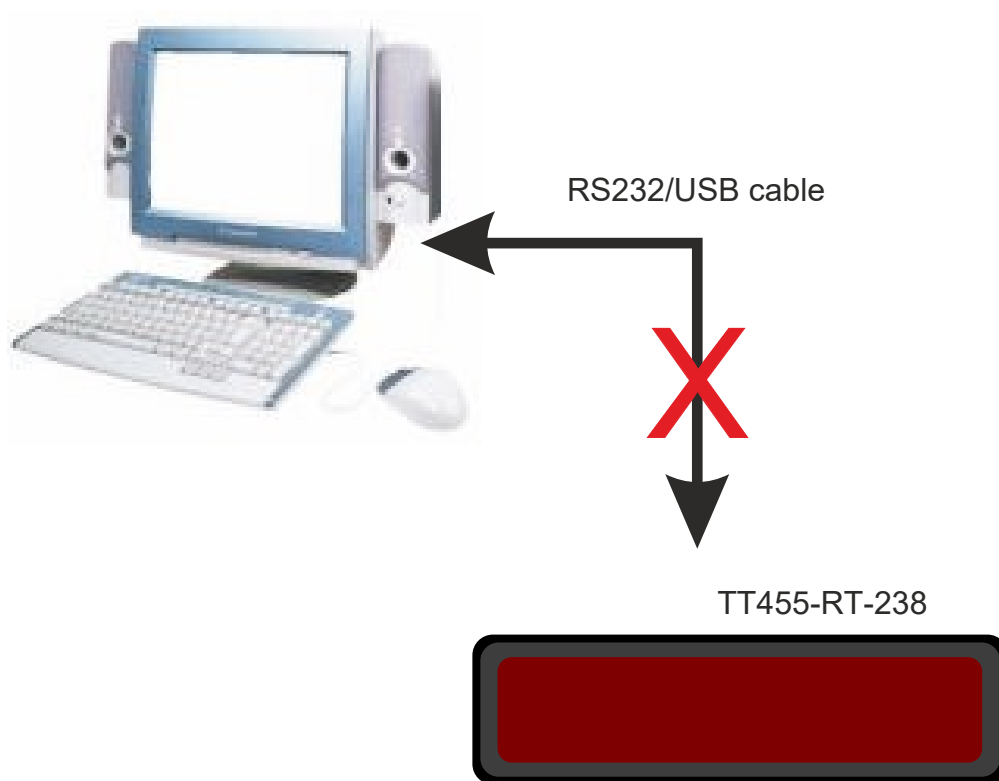

If the Configuration is set to react to this Trigger, it will activate a macro holding the required Actions.

A macro can hold from 1 to 250 Actions.

The Triggers and Actions are easily customized in our Configurator program and can be changed anytime to accomodate new products.

Configuration is stored into the product.

and you may now remove the product from the computer and place it in your home, allowing it to work as a standalone controller.
